[AE-IntroToVir-Lab4.3.1] [READING-LAB] Citrix Networking Configuration Results

Assessment Summary:

Name: Francisco Medina diaz
Email: W211144006@student.hccs.edu
Date: 11/14/2025

Result:

Score: 100%
Correct Answers: 5 out of 5

Excellent! You have a strong understanding of Azure services.

Question Review:

Question 1: After creating three custom networks (Isolated-Lab-Network, DMZ-Network, Management-Network), how many custom networks are visible in the Networking section, in addition to the default ones?

Your answer: Three

R e s u l t : ' C o r r e c t

Question 2: What can VLAN tags be used for within the same physical network infrastructure?

Your answer: To create additional network isolation and segmentation.

R e s u l t : ' C o r r e c t

Question 3: If "Network-Test-VM1" has one interface connected to "DMZ-Network" (External/Bridged) and another to "Isolated-Lab-Network" (Internal/Isolated), and "Network-Test-VM2" is only connected to "Isolated-Lab-Network", what connectivity scenario is created?

Your answer: VM1 has external and isolated access, while VM2 only has isolated access.

R e s u l t : ' C o r r e c t

Question 4: What is the primary focus of Lab 4.3 regarding Citrix VMs?

Your answer: Configuring virtual networks and network interfaces.

R e s u l t : ' C o r r e c t

Question 5: According to the lab, what type of network provides connectivity only between VMs on the same hypervisor host and does not connect to external networks?

Your answer: Internal network

R e s u l t : ' C o r r e c t
